Job Description:

Senior Java J2EE Developer

We are looking for a senior candidate that has experience with Java, over 5 -8 years development experience using J2EE. The individual will be responsible for programming our proprietary software products to implement new features and support current applications. Additional responsibilities include being part of a collaborative team that produces a quality product for our clients. This candidate will be mentored by our senior development staff, and then be expected to mentor junior level hires into the group. This position offers great growth potential. Knowledge on Web services, EAI, SAP, SAP Netweaver, LDAP or other identity management systems and workflow systems is a plus.

Responsibilities:

- Work with US teams from India and act as point of contact for one or more projects.
- Provide estimates on coding efforts for the assigned tasks and perform the project management activities such as status tracking, reporting, and risk management.
- Provide assistance as necessary to other developers
- Provide technical and functional training to the junior developers.
- Update appropriate java code to implement new feature and resolve issues discovered by QA in the existing applications

Requirements:

- Should have 5 to 8 years of experience in designing, developing and deploying WEB/J2EE applications.
- The candidate must have excellent programming skills using J2EE technologies with good command over design tools, development and deployment experience on BEA Web Logic, Apache Tomcat application servers.
- Strong Coding Skills in Java/J2EE, JSP, Servlets, Java Beans, EJB, XML, XSL and PL/SQL Programming.
- Deployment and integration Skills using SAP WAS and BEA Web logic and Apache TOMCAT, and Web Sphere.
- Should have capabilities to manage module or small team if required and should have experience in one or more complete life cycle modules.
- Should have working experience in multiple operating systems, Windows, Unix and Linux/Solaris
